Grab, lift and turn drums

WITH OUR ELECTRIC DRUM LIFTERS

Drums come in a variety of heights, diameters and weights, but with the common denominator that they need to be moved and emptied.

Some drums have handles, but the vast majority are very challenging if not impossible to grab, lift and pour.

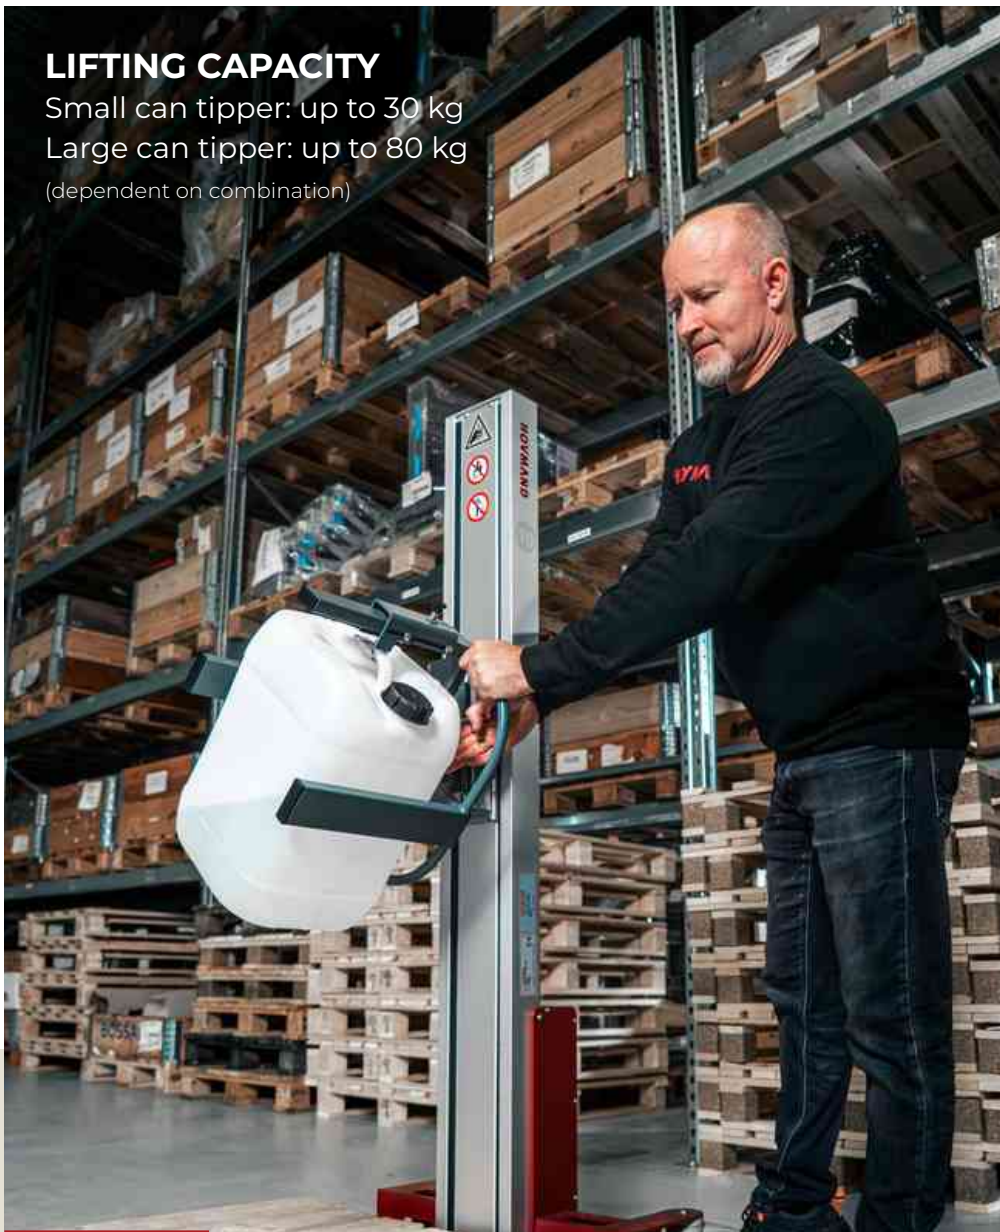

Our electric drum lifters **safely pick up drums and precisely turn** them at varying speeds depending on your need. If you want your drum **tilted**, our lifters can handle that too. To ensure a firm grip of the drum no matter the weight, material or diameter, we have developed a wide selection of grippers, lifting column loads and chassis.

LIFTING CAPACITY

Small can tipper: up to 30 kg

Large can tipper: up to 80 kg

(dependent on combination)

Safely decant plastic or metal cans

THAT CALLS FOR THE USE OF SPECIALISED TOOLS

Chemicals, soap, beverages and much more are delivered in small and large cans. The smaller cans, weighing under 10 kg, are usually manageable but as soon as the cans get heavier, carrying, transporting and emptying them becomes a challenge.

With the right manual lifting equipment, **a single employee can decant cans safely and efficiently without endangering their health.** At Hovmand, we have developed the mobile can lifter, which is a three-in-one solution:

✓ LIFTING

✓ TRANSPORTING

✓ DECANTING

How to empty a plastic bucket

WITH A STRAP ON OUR BUCKET & DRUM HANDLER

During the production process, granulates, powders or bulk materials are often transported from the warehouse to the place of production in buckets or small drums and then filled into other containers.

For your containers with **irregular shapes**, such as drums, buckets or cans, **we have developed a solution which makes ergonomics even more affordable:** Our Bucket & Drum Handler.

Buckets and drums are strapped onto a lifting device with a strap which functions according to the principle of a seat belt. It can be loosened and rolls up again automatically.

LIFTING CAPACITY

Crane arm:
up to 300 kg

(dependent on
combination)

LIFTING CAPACITY

Even **small buckets** can become heavy loads for an employee when they often need to be lifted or carried back and forth.

We also provide various lifting equipment for this requirement. E.g. lifts with electric grippers, but also simpler, less expensive tools such as the crane arm, which can be equipped with different slings, straps or traversers for handling buckets and other containers.

Using a lifter with a crane arm is the **smart solution for loads that do not have standard dimensions.** Health-friendly and cost-effective.

Safe solutions for
moving heavy drums
and buckets

Prevent back problems in your workplace

3 shortcuts to a healthy back with a lifter that

- ✓ lifts and turns up to 300 kg for you
- ✓ ensures you only do correct lifts
- ✓ is easy to work with – for everyone
